

In regards to the BPL proposal facing the FCC, I have heard and seen audio test results of the test equipment measuring BPL interference to amateur HF frequencies. I would like to file a comment so that the FCC will see the need for BPL as much less important than the need for clear amateur radio frequencies used for first emergency response, government agency and community agency emergency support, and health and welfare community support in times of local and wide area emergencies. Other means of sending digital data already exist on telephone and cable tv circuits, or wireless, that do not interfere with amateur radio frequencies. Please defeat the BPL proposal and maintain the security and safety of our nation by keeping amateur frequencies clear of destructive interference.

Thank you,
Paul Dumbacher
